

SAAB

MISSION **MAN-PORTABLE ATGW**
GUIDANCE **ADVANCED SACLOS**
FEATURE **MULTI-MISSION**

BILL 2 THE **MULTI-MISSION** ATGW

The BILL 2 overfly, top attack, anti-tank missile system combats both moving and static targets at ranges out to 2200 metres. The missile is wire guided, immune to jamming and it attacks the weakest part of the target from above. It requires no lock on or cooling down time before launch, giving it very short reaction times. BILL 2 with its high mission capability is made for any terrain and defeats anything from MBTs to lightly armoured combat vehicles and secondary targets.

Besides being light and man-portable it can also be vehicle configured. When deployed in ground action it is operated by a two-man crew. And to increase its target flexibility the missile can be launched in three modes.

SAAB

BASIC MODE

- Elevated flight path
- All sensors activated
- Algorithms optimised for BILL 2 threat

In Basic mode, employing OTA, the two interactive, dynamically compensated, vertically striking shaped charges attack the MBT from above striking down through the turret roof, avoiding the heavily protected frontal arc. The fuze system consists of both a dual-sensor proximity fuze and an impact fuze.

NON-ARMoured TARGET MODE

- Flight path on LOS
- All sensors disconnected
- Impact fuze function

BILL 2 give the soldier in action the ability to detect, recognise and identify before engaging the target.

With its multi-mission capability it is easy to see that BILL 2 can be employed anywhere aggressors threaten the peace.

SOFT TARGET MODE

- Elevated flight path
- Magnetic sensor disconnected
- Optical sensor activated
- Special algorithms

In storage its shelf life exceeds 15 years and requires no maintenance.

The system deployed and ready for action.

Thermal imager BIRC mounted.

SYSTEM FEATURES

Combat range	150 – 2,200 m
Guidance principle	advanced SACLOS
Warhead arrangement	Tandem warhead
Shelf life	15 year
