Abstract

Advanced military systems are some of the most expensive and most complex research, design, and manufacturing challenges in the world. The sheer cost of military procurement worldwide is measured in the trillions of dollars, and for decades costs risen seemingly indefinitely. As a result, many companies are seeking new ways of working that will control costs while delivering the highest quality. Saab Defense has adopted an Agile process to address the issue in both hardware and software teams to produce a new multi-role strike fighter, the JAS 39E Saab Gripen.

1. Introduction

While predecessors to Test Driven Development and related Agile practices such as dedicated, co-located, cross functional teams

with flexible priorities have been used in fighter jet design as early as 1960 [2], modern Agile practices such as Scrum roles and release burn down charts in complex systems may be pioneered by Saab Aeronautics.

3. Agile at Saab

Saab introduced Agile [3] practices approximately ten years ago during updates of the previous Gripen versions. First, small independent teams of software developers

Object Oriented Architecture

System Group built of Module Teams and Functional Teams

Practices are not Prescriptive

- Teams have varying levels of maturity
- All have visual boards and daily Stand-Up meeting
- All teams have 3 week sprints, starting and ending on the same day.
- All teams have multi-level planning before sprint start.
- Teams have authority to optimize other aspects of the process to their own local context.
- e.g. Many teams add technical practices from XP and flow maximizers from Kanban

Hardware Is All Software Anyway

Anyone in the company at any time has access to complete current 3d model and software. Everyone has the flight sim running the current CAD and code on their desktop.

Can test new part or code in simulation, fly the plane around on their desktop. Simulate high speed collision with a bird. Simulate more powerful fuel pump. Try different bolt sizes. Whatever.

The complete commitment to scaled simulation is inspiring.

Collocation

Scrum Room

Culture

- Teams do the detailed planning
- Teams set the sprint targets (aligning the overall time plan)
- Teams celebrate their victories

- **Complete commitment at the team level.**
- **Planes are cool. Only Google is rated more desirable work choice by graduating engineers.**
- **“May we please work even just 4 hours on Saturday?” Some teams opt for overtime.**
- **Swedish engineering culture: Don’t ask manager to get something for you from another department, go there yourself right now and get it.**

How SAAB Launches a New Scrum Team

- Majority of team members have been delivering every three weeks using Scrum at SAAB for years.
- Makes team boot-up almost automatic.

Three week beat/
sprint cycle:

- Teams-level:
Synchronizing needs
and demands of
- But continuous
deliveries

Quarterly beat/
increment cycle:

- Sub-project-level:
Synchronizing needs
and demands
- Increment conference

Management

- Manage cost by looking at speed and flow of teams, time costs money.
- Highest priority is to remove impediments
- Decompose contract into systems with goals on their Scrum Boards, have daily Scrum senior management meetings.
- Product Owners decompose system goals into backlogs of targets (goals).
- Backlogs with burn downs create the schedule of increments with targets (goals).
- All of Saab Aeronautics on the same 3 week sprint, same start and end day. "It is a Heartbeat. Everyone knows what day of the Sprint we are on."
- All Systems, Goals, and Backlogs on Physical Scrum Boards visible to all staff.

Regulatory Compliance

- Certifying officials on site regularly throughout iterative development.
- Certification documents developed iteratively.
- Over time, trust has been earned between certifying officials and development teams.
- Final certification almost instant, and a formality.

Quality

Agile Issues

Ready Backlog
Prioritized Backlog
Clean Backlog

Other Companies

- Other SAAB groups are using Scrum.
- Scrum is becoming the new normal for hardware companies in Sweden.

ENGINEERING ON THE FAST TRACK

RAYTHEON'S AGILE ENGINEERING CREATES NEXT-GEN RADAR

Raytheon engineers use Agile techniques to collaborate on a variety of complex systems, including the Air and Missile Defense Radar.

The engineers call it "The Radar House."

Air & Missile Defense Radar software - and targets - on track

November 17, 2014

Raytheon's accelerated milestone powered by Agile development

TEWKSBURY, Mass., Nov. 17, 2014 /PRNewswire/ -- Raytheon Company's (NYSE: RTN) first major software build for the new **Air and Missile Defense Radar** successfully tracked a simulated Anti-Air Warfare (AAW) target. The milestone verified the infrastructure and functionality of the AMDR software build, which was demonstrated less than eight months after contract award – an achievement made possible by the company's agile software development
